

Managing Modern Desktops

Course duration

4 days (32 hrs)

Descripción del curso

En este curso, los estudiantes aprenderán a planear e implementar una estrategia de implementación de sistemas operativos utilizando métodos de implementación modernos, así como a implementar una estrategia de actualización. A los estudiantes se les presentarán los componentes clave de las estrategias modernas de gestión y cogestión. En este curso también se explica lo que se necesita para incorporar Microsoft Intune en su organización. Los estudiantes también aprenderán sobre los métodos para la implementación y administración de aplicaciones y aplicaciones basadas en navegador. A los estudiantes se les presentarán los conceptos clave de seguridad en la administración moderna, incluidas las políticas de autenticación, identidad, acceso y cumplimiento. A los estudiantes se les presentarán tecnologías como Azure Active Directory, Azure Information Protection y Microsoft Defender para punto de conexión, así como también cómo aprovecharlas para proteger dispositivos y datos.

Perfil de la audiencia

El administrador de escritorio moderno implementa, configura, protege, administra y supervisa dispositivos y aplicaciones cliente en un entorno empresarial. Las responsabilidades incluyen la administración de identidades, acceso, políticas, actualizaciones y aplicaciones. El MDA colabora con el administrador de M365 Enterprise para diseñar e implementar una estrategia de dispositivos que satisfaga las necesidades empresariales de una organización moderna. El administrador de escritorio moderno debe estar familiarizado con las cargas de trabajo de M365 y debe tener conocimientos y experiencia sólidos en la implementación, configuración y mantenimiento de dispositivos Windows 10 y posteriores y que no sean Windows. El rol de MDA se centra en los servicios en la nube en lugar de en las tecnologías de administración locales.

Prerrequisitos

El administrador de escritorio moderno debe estar familiarizado con las cargas de trabajo de M365 y debe tener conocimientos y experiencia sólidos en la implementación, configuración y mantenimiento de Windows 10 y versiones posteriores, y dispositivos que no sean Windows. El rol de MDA se centra en los servicios en la nube en lugar de en las tecnologías de administración locales. Se recomienda que los estudiantes completen el curso MD-100, Windows Client, antes de tomar este curso.

Course outline

Module 1: Modern Management

This module explains the concepts of supporting the desktop through its entire lifecycle. Finally, students will be introduced to the tools and strategies used for desktop deployment. Students will be introduced to the concept of directory in the cloud with Azure AD. Students will learn the similarities and differences between Azure AD and Active Directory DS and how to synchronize between the two. Students will explore identity management in Azure AD and learn about identity protection using Windows Hello for Business, as well as Azure AD Identity Protection and multi-factor authentication.

Lessons

- The Enterprise Desktop
- Azure AD Overview
- Managing Identities in Azure AD

Lab: Managing identities in Azure AD

Lab: Using Azure AD Connect to connect Active Directories

After completing this module, students will be able to:

- Describe the enterprise desktop lifecycle.
 - Describe the capabilities of Azure AD.
 - Manage users using Azure AD with Active Directory DS.
 - Implement Windows Hello for Business.
 - Join devices to Azure AD.
-

Module 2: Device Enrollment

This module will also cover Azure AD join and will be introduced to Microsoft Endpoint Manager, as well as learn how to configure policies for enrolling devices to Endpoint Manager and Intune.

Lessons

- Manage Device Authentication
- Device Enrollment using Microsoft Endpoint Configuration Manager
- Device Enrollment using Microsoft Intune

Lab: Manage Device Enrollment into Intune

Lab: Configuring and managing Azure AD Join

Lab: Enrolling devices into Microsoft Intune

After completing this module, students will be able to:

- Configure and join devices to Azure AD
- Configure device enrollment in Microsoft Endpoint Manager
- Enroll devices in Endpoint Configuration Manager and Intune

Module 3: Configuring Profiles

This module dives deeper into Intune device profiles including the types of device profiles and the difference between built-in and custom profiles. The student will learn about assigning profiles to Azure AD groups and monitoring devices and profiles in Intune. You will be introduced to the various user profile types that exist in Windows for on-premises devices. You will learn about the benefits of various profiles and how to switch between types of profiles. You will examine how Folder Redirection works and how to set it up. The lesson will then conclude with an overview of Enterprise State roaming and how to configure it for Azure AD devices.

Lessons

- Configuring Device Profiles
 - Managing User Profiles
-

Lab: Configuring Enterprise State Roaming**Lab: Creating and Deploying Configuration Profiles****Lab: Monitor device and user activity in Intune****After completing this module, students will be able to:**

- Describe the various types of device profiles in Intune
- Create, manage and monitor profiles
- Manage PowerShell scripts in Intune
- Explain the various user profile types that exist in Windows.
- Explain how to deploy and configure Folder Redirection.
- Configure Enterprise State Roaming for Azure AD devices.

Module 4: Application Management

In this module, students learn about application management on-premise and cloud-based solutions. This module will cover how to manage Office 365 ProPlus deployments in Endpoint Manager as well as how to manage apps on non-enrolled devices. The module will also include managing Win32 apps and deployment using the Microsoft Store for Business. This module will conclude with an overview of Microsoft Edge and Enterprise Mode.

Lessons

- Implement Mobile Application Management (MAM)
- Deploying and updating applications
- Administering applications

Lab: Configure App Protection Policies for Mobile Device**Lab: Deploying cloud apps using Intune****Lab: Deploy Apps using Endpoint Configuration Manager****Lab: Deploy Apps using Microsoft Store for Business****After completing this module, students will be able to:**

- Describe the methods for application management.
 - Deploy applications using Endpoint Manager and Group Policy.
 - Configure Microsoft Store for Business.
 - Deploy Office365 ProPlus using Intune.
 - Manage and report application inventory and licenses.
-

Module 5: Managing Authentication in Azure AD

This module covers the various solutions for managing authentication. The student will also learn about the different types of VPNs. This module also covers compliance policies and how to create conditional access policies.

Lessons

- Protecting Identities in Azure AD
- Enabling Organization Access
- Implement Device Compliance Policies
- Using Reporting

Lab: Creating device inventory reports

Lab: Configuring and validating device compliance

Lab: Configuring Multi-factor Authentication

Lab: Configuring Self-service password reset for user accounts in Azure AD

After completing this module, students will be able to:

- Describe Windows Hello for Business
- Describe Azure AD Identity Protection
- Describe and manage multi-factor authentication
- Describe VPN types and configuration
- Deploy device compliance and conditional access policies
- Generate inventory reports and Compliance reports using Endpoint Manager

Module 6: Managing Security

In this module, students will learn about data protection. Topics will include Windows & Azure Information Protection, and various encryption technologies supported in Windows. This module also covers key capabilities of Microsoft Defender for Endpoint and how to implement these capabilities on devices in your organization. The module concludes using Microsoft Defender and using functionalities such as antivirus, firewall and Credential Guard.

Lessons

- Implement device data protection
 - Managing Microsoft Defender for Endpoint
 - Managing Microsoft Defender in Windows Client
-

Lab: Configuring Endpoint security using Intune

Lab: Configure and Deploy Windows Information Protection Policies by using Intune

Lab: Configuring Disk Encryption Using Intune

After completing this module, students will be able to:

- Describe the methods protecting device data.
- Describe the capabilities and benefits of Windows ATP.
- Deploy and manage settings for Windows Defender clients.

Module 7: Deployment using Microsoft Endpoint Manager - Part 1

In this two-part module, students will be introduced to deployment using Microsoft Endpoint Manager. Part 1 will cover the tools for assessing the infrastructure and planning a deployment, followed by deployment using the Microsoft Deployment Toolkit and Endpoint Configuration Manager.

Lessons

- Assessing Deployment Readiness
- On-Premise Deployment Tools and Strategies

Lab: Deploying Windows 10 using Microsoft Deployment Toolkit

Lab: Deploying Windows 10 using Endpoint Configuration Manager

After completing this module, students will be able to:

- Describe the tools for planning a deployment.
 - Deploy Windows clients using the Microsoft Deployment Toolkit
 - Deploy Windows clients using Endpoint Configuration Manager
-

Module 8: Deployment using Microsoft Endpoint Manager - Part 2

This module continues with deployment using Microsoft Endpoint Manager. In part two, the student will learn about using Windows Autopilot and deployment using Microsoft Intune. This module will also include dynamic OS deployment methods, such as Subscription Activation. The module will conclude learning how Co-Management can be used to transitioning to modern management. Finally, students will be introduced to Azure Virtual Desktops and how to configure and manage cloud PC using Windows 365.

Lessons

- Deploying New Devices
- Dynamic Deployment Methods
- Planning a Transition to Modern Management
- Managing Virtual Desktops

Lab: Configuring Co-Management Using Configuration Manager

Lab: Deploying Windows 10 with Autopilot

After completing this module, students will be able to:

- Deploy Windows 10 using Autopilot
- Configure OS deployment using subscription activation and provisioning packages
- Upgrade, migrate and manage devices using modern management methods

Module 9: Managing Updates and Using Analytics

This module covers managing updates to Windows. This module introduces the servicing options for Windows clients. Students will learn the different methods for deploying updates and how to configure windows update policies. Finally, students will learn how to ensure and monitor updates using Desktop Analytics.

Lessons

- Updating Windows Clients
 - Windows Update for Business
 - Desktop Analytics
 - Endpoint Analytics
-

Lab: Managing Windows 10 security and feature updates

After completing this module, students will be able to:

- Describe the Windows client servicing channels.
 - Configure a Windows update policy using Group Policy settings.
 - Configure Windows Update for Business to deploy OS updates.
 - Use Desktop Analytics to assess upgrade readiness.
 - Use Endpoint Analytics to monitor user experience and assess Windows 11 readiness
-
